

Total Automatic Communications (TAC)

A preconfigured and integrated solution for any size business, institution or personal use.

Innovation Delivered³

In today's world, day-to-day business or personal needs may require assistance to address planned or unplanned events, especially when cut-off from communication or power. Innovative approaches are necessary to ensure continuous communication, power and productivity. At Innovation Delivered³ (ID³) our goal is to open our clients' eyes to innovation, so you can keep your eyes on your business.

The ID³ Total Automated Communication (TAC) solution ideal for businesses, institutions or individuals interested in an automated solution that can be taken out of the box and set-up within minutes. The uses are broad and could include business continuity, security, safety, education, rescue and humanitarian.

The TAC comes with wireless options such as B-Gan connectivity. Because the solution is Internet Protocol (IP) based, you still have the ability to leverage your existing IP devices and web based applications, or add capabilities such as device independent interoperable voice communications. You could improve your return on investment even more by sharing your budget with other organizations and individuals as you address continuous communications, power and productivity challenges.

Operations Anywhere

- IP Video Conferencing,
- Local or long distance phone calls
- High Speed Serial connections
- IEEE 802.11g Wireless Networking
- 2 Power over Ethernet ports
- 8 Standard Ethernet Ports
- Built in GPS (Optional)
- Rugged phone (Optional)
- Allows high speed communications via site to site VPN
- Satellite, INMARSAT, RBGAN, broad band, 802.11X, and ISDN capable
- Unit dimension (closed) – 18.5"x13"x7"
- Power – 12V DC or 115 VAC 60Hz, 220 VAC 50 Hz
- SIPR Unit Weight – 20 lb per case
- NIPR Unit Weight – 20 lb per case
